Its ability to create archives and archives of many formats (with a selection to exclude those that are inappropriate), and the option to have the archive password protected at the time of creation, is a unique one. Encrypt: Secure Archiving can also be used as an encryption utility to protect files from misuse or gain of unauthorized access. When you create a password protected archive, you can encrypt the files with a given encryption algorithm, and you can choose the number of passes the encryption algorithm needs to run. This will permanently remove the file from your computer.
